

# GENDER HURTS WOMEN!

Gender ideology dictates that a person's "gender identity" trumps their **sex**.

This means that **any man** who says he "**feels like a woman**" should have the right to access:

- Women's spaces and services including **changing rooms and toilets, domestic violence refuges, rape crisis centres, hospital wards and prisons**
- Women's jobs including counselling **survivors of sexual assault** and providing **intimate care** to older women and those with disabilities and severe learning difficulties
- Women's sports events, where men typically have a **massive advantage** over women in terms of strength, stamina and speed

The adoption of **gender ideology** by institutions such as **government bodies, the police, schools** and the **NHS** has resulted in:

- **Women and girls** being **sexually molested** and **traumatised** in what should be safe single-sex spaces
- Female **survivors of sexual assault** feeling too anxious and inhibited to accept the services of **rape crisis centres**
- Sportswomen being **displaced by men** in teams and medals tables

# GENDER HURTS CHILDREN!

Children are being **misled** into believing they can become the **opposite sex**.

This is happening on social media sites and in many **classrooms** around the country. Some schools are:

- Allowing pupils to declare themselves “transgender” and use a different name **without informing that pupil’s family**
- Replacing **single-sex toilets** with **gender-neutral** ones, causing many children to feel inhibited and distressed

Children who medically transition may be prescribed “**puberty blockers**”. Contrary to what is often claimed, they are **not fully reversible** and **known side effects** include adverse effects on **bone density, brain development** and future **fertility**.

Most children who suffer from “gender dysphoria” during childhood and adolescence eventually come to terms with their sex without treatment. Almost all children who are prescribed **puberty blockers** go on to take **cross-sex hormones** and have **major surgeries**. All of these medical interventions have **potentially serious and irreversible consequences**. The number of children – especially girls – who are medically transitioning is rising and so is the number who come to **regret** it.
